

**IN THE ABSTRACT**

Page 5, lines 2-9 have been amended as follows:

New pattern reading glasses are provided ~~of the present invention. The reading glasses indicate~~ with lenses put into a lens frame of a single vision ~~reading glasses type~~. An optical center of the lenses is located at the cutting line of an upper rim of the lenses and within a range, ~~which ranges~~ from 2 mm above and 2 mm below ~~thereof~~ the cutting line. With the single vision reading glasses, no matter if ~~[[your]]~~ you are looking at close scenery by the lenses or looking at distant scenery by the naked eye, the variation of interlaced images is reduced when an image is watched by the naked eye and by lenses alternately. Therefore, the reading glasses provide more comfortable eyesight.
